Correction: Formation and evolution of idiopathic lamellar macular hole—a pilot study

Cheng-Yung Lee¹, Yun Hsia^{1,2} and Chung-May Yang^{1,3*}

Correction: *BMC Ophthalmol* 22, 432 (2022)
<https://doi.org/10.1186/s12886-022-02669-4>

Following publication of the original article [1], the author group reported errors in the reference citation.

The corrected text citations are given below:

In page 6, the first paragraph should read, “Thus, initial formation step of degenerative LMH comes from tractional event, and epiretinal proliferation degeneration configuration follows [2] (reference 20 in the original article). Hsia et. al. in the study of LMH in high myopia also suggested that degenerative configuration appears in the evolutionary processes of LMH, and the early developmental process were all tractional [3] (reference 21 in the original article).”

In page 6, the second paragraph should read, “Although the formation time of secondary LMH have been reported [4, 5] (references 22, 23 in the original article), it is difficult to determine the formation time of idiopathic LMH because there is no specific ocular event that can be seen as the starting point of LMH formation.”

The original article [1] and the reference list have been corrected.”
